

ASSIGNMENT 5 - NGA NGUYEN

HEURISTIC EVALUATION OF SIMPLE TOOLS

Main task: Use length conversions between feet and meters.

I. **convert-me.com**

1. Aesthetic and minimalist design

- Severity: 3
- Description: There is too much information on the webpage, making it distracting. Also, the layout is complicated with different elements, font sizes and colors. There is no visual harmony of the interface.

The screenshot shows the 'convert-me.com' website. On the left is a sidebar with a list of categories: Basic, Ancient and Historical, Special, Engineering, Computer, and Don't know?. The main content area is titled 'Convert Length and Distance Units Instantly'. It includes a 'Metric' section with a table of conversions (kilometer, meter, decimeter, centimeter to millimeter, micrometer, nanometer, angstrom) and an 'American System (US Customary Units) and British Imperial Measures' section with a table (league, mile, yard, foot). A hint box suggests that hitting Enter or Tab also triggers calculations. The page is cluttered with many small links and text elements.

However, the site provides a solution, which is a bit hard to locate as the font size is too small. The information said that users can hide some blocks if users do not need them by clicking “hide” .

This screenshot shows the 'International Nautical Measure' section. It lists units: nautical league (naut.leag), nautical mile (naut.mi), cable length (cbl), and fathom (fath). There is a 'show' button. Below this are three more sections: 'US Nautical Measure' (US nautical mile, US cable length, US fathom), 'British (Imperial) Nautical Measure' (Admiralty mile, Admiralty cable length), and 'Spanish Customary Units Still In Use Today'. The last section has a 'hide' button. The text explains that these units are still used in some Latin American countries and provides a link to a 'historical lengths page'.

2. Flexibility and efficiency of use:

- Description: It is easy and fast to convert from one unit to all the other units. For example when user types 2 in meters, other units also are converted automatically, even without typing Enter.

metric hide

kilometer (km)	<input type="text" value="0.002"/>	millimeter (mm)	<input type="text" value="2,000"/>
meter (m)	<input type="text" value="2"/>	micrometre (micron)	<input type="text" value="2,000,000"/>
decimeter (dm)	<input type="text" value="20"/>	nanometer (nm)	<input type="text" value="2,000,000,000"/>
centimeter (cm)	<input type="text" value="200"/>	ångström	<input type="text" value="20,000,000,000"/>

i Hint: You don't have to click "Convert Me" button every time. Hitting Enter or Tab key after typing in your value also triggers the calculations.

The American System (US Customary Units) and British Imperial Measures hide

American weights and measures are based on units used in Britain prior to 1826, when imperial system was officially established. Until 1960-1963 American and British units of length were different in 2 parts per million. In the middle of 20th century it started causing problems and the governments of the two countries agreed to refine the measures to exactly match. Since then Great Britain and the United States were using the same measures of length. In the U.S. the old standard of foot was retained with the name US survey foot.

From 1995 the UK adopted metric units for general use. The only imperial measures of length that can be officially used now are miles, yards, feet and inches for road traffic signs.

league	<input type="text" value="0.0004142"/>	yard (yd)	<input type="text" value="2.187"/>
mile (mi)	<input type="text" value="0.001243"/>	foot (ft)	<input type="text" value="6.562"/>
land	<input type="text" value="0.001243"/>	feet and inches (x'y")	<input type="text" value="6'6.74"/>
furlong	<input type="text" value="0.009942"/>	span	<input type="text" value="8.749"/>
bolt	<input type="text" value="0.05468"/>	hand	<input type="text" value="19.69"/>
chain	<input type="text" value="0.09942"/>	inch (in)	<input type="text" value="78.74"/>
pole	<input type="text" value="0.3977"/>	line	<input type="text" value="944.9"/>
rod (rd)	<input type="text" value="0.3977"/>	mil	<input type="text" value="78,740"/>
perch	<input type="text" value="0.3977"/>	microinch	<input type="text" value="78,740,157"/>

3. Error prevention

- Description: This site has a good design for error prevention. If users type something, which are not numbers, the whole line will be highlighted and the system keeps users informed that they are mistyping.

Metric

kilometer (km)

meter (m)

decimeter (dm)

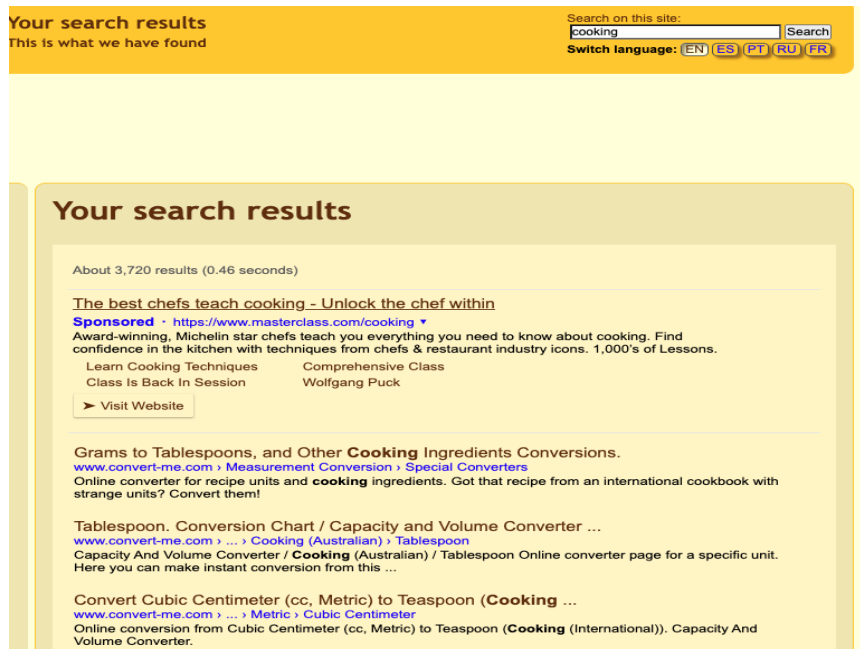

centimeter (cm)

4. Recognize, diagnose and recover from errors

- The site has good design for users to recognize and recover from errors.
- Description: The red color highlights well the "?" question mark and asks users if "Is it a number? ..." Error message here is expressed in clear language, indicating a problem and a solution at the same time. It indicates that users are mistyping and users should type some numbers instead.

5. Help and documentation:

- The site has good design on help and documentation.
- Description: The site has a search bar which allows users to search on the site. The results are well presented and focused on only this site.

Also, the left side navigation is organized well, despite the font size being small and too much information.

II. omnicalculator.com

1. Aesthetic and minimalist design

- Severity: 3
- Description: Some information in the webpage is not really relevant. User only wants to convert quickly from meters to feet or vice versa, not really interested in the history or definition of conversions/ units

- Description: The site lets users type anything without alerting them when they are mistyping something, which is not a number.

Metric

Length in millimeters

fvsvdfv

mm

Length in centimeters

fsf

cm

Length in meters

m

Length in kilometers

km

4. Recognize, diagnose and recover from errors

- Severity: 4
- Description: There is no warning or alert about possible errors that users make, therefore, it sometimes makes users feel confused when they do not understand the problem and do not know how to fix it.

5. Help and documentation:

- Severity: 2
- Description: The site provides documentation about length conversion chart, table and definitions of units. The information is also organized into categories, which helps users navigate and have an overall look.

Table of contents

[Length conversion table](#)

[Length conversion chart](#)

[Inch definition](#)

[Feet definition](#)

[Meter definition](#)

[Imperial / US measurement system](#)

[Metric measurement system](#)

[FAQs](#)

However, the idea of writing all the information below the table of contents makes the page look very lengthy and as a user, I found it

tiring to look at it.

III. asknumbers.com

1. Aesthetic and minimalist design

- Severity: 2
- Description: Too many words, the representative images are small. There is no need for arranging the conversion into alphabetical order. Rather than that, bigger representative pictures are more preferable.

In Alphabetical Order			
 Acceleration Foot/square second, kilometer/hour second, meter/square second, mile/hour minute	 Base Numbers Base number conversions from base 2 to base 36, hex, decimal, binary, octal	 Calorific Calorific units, btu/cubic foot, joule/cubic meter, therm/cubic foot	 Circular/Angle Circular and angle units, radian, degree, grade, minute, second, circumference
 Data Transfer Data transfer units, adsl, modem, usb, ethernet, fiber optics and other several networking devices	 Date/Time Date and time conversions, second, millisecond, minute, hour, day, week, month, year, century	 Density $\rho = \frac{m}{v}$ Density units converter, gram/cubic millimeter, kilogram/liter, ounce/cubic foot, pound/gallon	 Digital Storage Digital storage units, bit, byte, megabyte, gigabyte, terabyte, exabyte
 Electrical Electrical conversions, resistance, capacitance, conductance, current, charge	 Energy/Work Energy and work units converter, btu, calorie, joule, kilojoule, newton meter, kilowatt hour	 Flow Rate Flow mass, flow volume and molar units converter	 Force Force units conversion, dyne, gram force, kilogram force, kilonewton, newton, ounce, pound force
 Frequency Frequency units converter, hertz, kilohertz, radian hour, degree second	 Fuel Economy Fuel economy conversions, mpg, L/100km, kml	 Heat Heat transfer coefficient, heat capacity and flux density units converters	 Light Illumination, luminance, luminous intensity units conversions
 Magnetic Magnetic flux and flux density units conversions	 Power Power units converter, btu/hour, megawatt, gigawatt, horsepower,	 Radiation Radioactivity, radiation exposure, absorbed dose units conversions	 Sound Sound units converter, bel, decibel (dB), neper (Np)

2. Flexibility and efficiency of use

- It is easy and fast to look up for other unit conversion tools and charts thanks to a table of options.

 Share  Share  Tweet  Email			
 Area Convert between acres, hectares, square meters, square feet and other types of area units	 Cooking Convert all types of cooking measurement units for cooking and baking recipes	 Length Convert meter, centimeter, inch, foot, yard, mile, kilometer and other common length units	 Pressure Convert atm, bar, pascal, kPa, MPa, psi, torr and all other units of pressure
 Temperature Convert between Celsius, Fahrenheit, Kelvin and Rankine temperature scales	 Size Conversion Convert Men's and women's clothing, shoes and ring sizes	 Weight Convert pound, ounce, kilogram, gram, milligram, stone, ton and other common weight units	 Volume Convert liter, milliliter, oz, gallon, cup, quart, pint, cubic meter, cubic feet and other common volume units

- It is also easy to transfer from meter to foot. There is no need to click anywhere after typing the input as the value is automatically

converted. It is quick and easy.

A screenshot of a web-based length conversion tool. It features a vertical stack of input fields, each preceded by a unit label: Inch, Foot, Yard, Mile, Millimeter, Centimeter, Meter, and Kilometer. The values entered in these fields are: 78,7401574, 6,56167979, 2,1872266, 0,0012427423844746678, 2000, 200, 2, and 0,002 respectively. At the bottom left, there is a blue link that says "all length conversions".

- It is convenient to have the option of “all length conversions” where users can choose freely to convert from exactly one unit to another.

Length Converter

Convert all length measurement units, including meters, feet, inches and cm, with our length measurement units conversion tool. Input a value in the provided field and choose the length units you wish to convert between.

A screenshot of a length converter interface. At the top left, it says "How to use the converter?" with a help icon. In the center is a large input field for the value to be converted. To the right of this field is a "Round:" label followed by a dropdown menu set to "12" and a help icon. Below the input field are two dropdown menus labeled "From" and "To". Both dropdowns have a list of units: centimeter, foot, inch, kilometer, and meter. The "From" dropdown has "centimeter" selected. Below these dropdowns is a large blue button labeled "Convert".

3. Error prevention

- It is impossible to type anything except numbers so it is good to prevent mistyped errors. However, the system doesn't inform users about what is wrong here (violated visibility of system status - severity: 2)

Length converter to convert between common Imperial and Metric length units. Enter a value into any of the fields below to instantly view the converted length in the remaining fields.

Inch

Foot

Yard

Mile

Millimeter

Centimeter

Meter

Kilometer

Round: 12 ▼

4. Recognize, diagnose and recover from errors

- Severity: 3
- Description: Although the site prevents the problem of mistyping from the first place when allowing users to only type numbers, there are no error messages when users mistype. This violates not only visibility of system status but also recognition and recovery from errors rules.

5. Help and documentation:

- The site also provides a good search bar that focuses on searching only the site, not Google.

To convert the same **area** to hectares, divide the result by 10000. You may also use the conversion calculator above

Decares to Ares Conversion

www.asknumbers.com › [decares-to-ares](#)

What is a Decare? Decare is a metric system **area** unit. 1 decare = 10 ares. The symbol is "daa". What is an Are? Are

Hectares to Decares Conversion

www.asknumbers.com › [hectares-to-decares](#)

Decare is a metric system **area** unit. 1 decare = 0.1 hectare. The symbol is "daa". Please visit all **area** units conversic

- The documentation has a good length and focuses on only converting between units, not the history of the units.

Metric Length Units:

The Metric system is based on powers of 10 and them, making it convenient to convert between c indicate multiples or submultiples of the base un measurements that are either very large or very prefixes and their symbols:

Remember that the Metric system base length u
All other Metric length units are either the fractic

- Kilo (k): 1 kilo is equal to 1000 units of the ba
- Hecto (h): 1 hecto is equal to 100 units of the
- Dekka (da): 1 deka is equal to 10 units of the t
- Deci (d): 1 deci is equal to 0.1 (1/10) of the b
- Centi (c): 1 centi is equal to 0.01 (1/100) of t
- Milli (m): 1 milli is equal to 0.001 (1/1000) of
- Micro (μ) : 1 micro is equal to 0.000001 (1/10
- Nano (n) : 1 nano is equal to 0.000000001 (1.

For each prefix, there is a specific conversion fac
larger unit, divide by the conversion factor and to
unit, multiply by the conversion factor.

For example to convert 250 centimeters (cm) to

1. We know that 1 meter (m) = 100 centimeters
2. To convert from centimeters to meters, divide

Therefore, $250 \text{ cm} \div 100 = 2.5 \text{ meters}$

CONCLUSION

1. convert-me.com has an overall best user experience in terms of efficiency of use, error prevention, recognition & recovery from error, help and documentation.
2. asknumbers.com has good design for efficiency of use and error prevention, however it does not inform users what is wrong (not good in terms of recognition and recovery from error). Help and documentation is informative and selective.
3. omnicalculator.com has good design for efficiency of use but nothing for error prevention and recognition, recovery from error. Help and documentation is lengthy and some of them are irrelevant (history of units, for example).

The heuristic evaluation gives a result that is consistent with my subjective user experience. So it is grading the same from how I felt when using these tools.
